

Renault Immobiliser unlock. Decoder/UCH information

Megane & Megane Scenic We need to know what colour the fuse box is. It is located under a cover to right of steering wheel and will be Black or Blue

If it is Blue like this one (left) then we need the engine ECU from under the bonnet We will extract the necessary code and return with a small, ready programmed, Bypass unit which needs to fitted to the plugs on top of this fuse box. Instructions are provided.

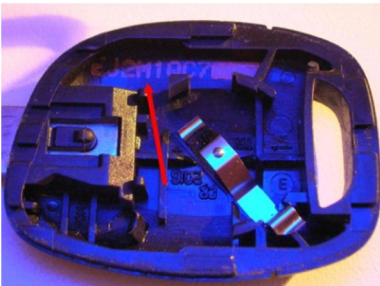

If it is Black then we can work from a number inside your key.

The number is either on a white label or engraved into the black plastic key head. The number begins with letter 'S'

We will supply a Bypass unit ready programmed which is fitted to the plugs on top of this unit. Instructions provided

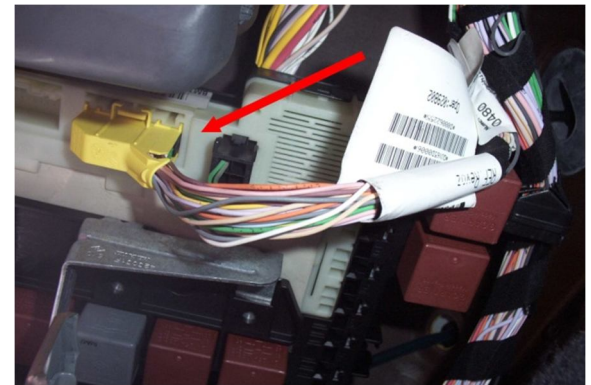

Renault Clio 2 (Radio aerial on front of roof)

We can either supply a ready programmed Bypass unit or Pin Entry Pod if there is a code number inside the ignition key. The number is either on a label on fob circuit board or sprayed inside the black plastic key head (see left) in UV

sensitive ink. The PEP sits on the vehicle diagnostic socket and can be left in place permanently. The Bypass is fitted to the plugs going to the UCH in passenger footwell. Instructions are supplied.

Clio UCH unit

You could also remove the UCH and send it to us. We will mount the bypass internally and return it

Renault Clio (early)

The early Clio Decoder unit is located behind dash..about opposite where drivers right knee would be. It just pulls off. If this unit (see left) is not there then look for this one (single plug decoder) located further over towards the door and higher

Single Plug decoder

Renault Kangoo/Master/Movano/Vivar

Decoder Unit

All these vans use the same decoder unit (Vehicles up to about 02)
These vehicles can be disarmed using the Pin Entry Pod or send this unit to us and we will mount the Bypass internally

On the Kangoo it is located behind the Speedo. Remove the screws from speedo assembly and pull the instrument pack forward. The

Decoder unit can be seen in bottom left hand corner.

On the Master etc it is usually located under dash behind steering column

For more information on the PIN ENTRY POD see website

Kangoo

Master etc 1

Renault Espace

Decoder unit is mounted behind this panel see picture

Espace pre '97

If yours is the later Espace IV then we need this unit from passenger side. On the Espace IV the immobiliser warning light can't be extinguished

Espace Body control unit
